De Morgan's laws:

- $\neg(p \vee q) \equiv \neg p \wedge \neg q$

- $\neg(p \wedge q) \equiv \neg p \vee \neg q$

Usage:

De Morgan's laws allow us to negate complex logical statements and to rewrite them in a different form that may be easier to understand or manipulate

Implication $p \Rightarrow q$

Def: An implication $p \Rightarrow q$ is a true if p is false or q is true.

p	q	$p \Rightarrow q$
T	T	T
T	F	F
F	T	T
F	F	T

> "innocent until proven guilty"

- $(q \Rightarrow p)$: converse of $p \Rightarrow q$

- $(\neg p \Rightarrow \neg q)$: contrapositive of $p \Rightarrow q$

- $p \Rightarrow q \equiv \neg q \Rightarrow \neg p \equiv (\neg p) \vee q$

If and only if $p \Leftrightarrow q$

$$p \Leftrightarrow q \equiv (p \Rightarrow q) \wedge (q \Rightarrow p)$$
